```

YouGov interviewed 20798 respondents who were then matched down to a
sample of 18200 to produce the final dataset. The respondents were
matched to a sampling frame on gender, age, race, education and state. The
frame was constructed by stratified sampling from the registered voter
portion of the 2016 Current Population Survey voter supplement with selection
within strata by weightedsampling with replacements (using the person weights on
the public use
file).

The matched cases were weighted to the sampling frame using entropy balancing.
The weights were then post-stratified on 2016 Presidential vote choice, and
a four-way stratification of gender, age (4-categories), race (4-
categories), and education (4-categories), to produce the final weight.
